Summary

Final-year Computer Science student and AI-native developer who ships production web apps by directing AI coding agents (Claude Code, VS Code Chat, Codex), while personally owning product decisions, database design and security. Built two freelance client platforms and an AI question-paper generator with RAG. Strong interest in data analytics with Python, SQL and Power BI.

Education

K.R. Mangalam University — Gurugram, Haryana
Bachelor of Technology in Computer Science & Engineering — *Expected July 2027*

Experience

Freelance Full-Stack Developer — Oct 2026 – Present
LearnAlaya | Coaching Institute Management Platform (client project, GitHub) — *Remote*

- Building solo, end to end, a platform with **4 role-based portals** (admin, teacher, student, parent) covering attendance, timetable, exams and results, fees, leave requests, notes, announcements and chat; **React 19**, **Supabase**, Netlify
- Designed a **30+ table PostgreSQL schema** secured by **60+ row-level security policies**, so each role can only read and write its own data at the database layer
- Hardened authentication: **mandatory 2FA** for admin access, forced password change on first login, deactivated-account lockout and idle sign-out; account actions run through **Supabase Edge Functions** (TypeScript)

Freelance Full-Stack Developer — Aug 2026 – Sep 2026
The Future Animations | Certificate Verification Portal (verifyfutureanimation.online) — *Remote*

- Built and deployed a production certificate verification portal for internship certificates: **React 19 + Tailwind** frontend on **Vercel**, **Flask** REST API on **Render**, **PostgreSQL** with SQLAlchemy and Alembic migrations
- Implemented unique certificate IDs and **QR codes**, so anyone can verify a certificate instantly from a public page, with every verification logged
- Developed a **JWT-secured admin panel** to issue and manage certificates, with a live statistics dashboard

Data & Operations Intern — Jun 2026 – Aug 2026
The Future Animations — *Hybrid*

- Coordinated animator workflows, tracked task progress and followed up on project deadlines
- Maintained project records and organized operational data using **Microsoft Excel** and **Google Sheets**
- Tracked pending tasks and prepared **progress reports** to support day-to-day operations

Projects

QPGen – AI Question Paper Generator | *Flask, Gemini API, pgvector, Supabase, GitHub Actions* — Deployed on Render

- Built an AI question bank of **400+ questions across 10 subjects**, tagged by Bloom's level and difficulty; papers are auto-assembled to a target marks distribution and exported as PDF
- Implemented a **RAG pipeline**: uploaded syllabus PDFs are chunked and embedded, and Gemini generates questions only from retrieved passages with **verified page citations**
- Added **semantic search** and duplicate detection using Gemini embeddings in **pgvector** (HNSW index, cosine similarity)
- Secured with **RBAC** (20 permissions, 4 roles), JWT + bcrypt and audit logs; set up **CI** (pytest on every push) and a daily GitHub Actions job that fills the public paper library

Netflix Content Analysis – Exploratory Data Analysis | *Python, Pandas, Matplotlib, Seaborn*

- Cleaned and analyzed **8.8k Netflix titles**; built 8 visualizations (genre heatmap, release trends, ratings, word cloud) showing a 70/30 movie-to-TV split and a sharp content surge after 2015

Frontend Websites – MedPoint, The Indus Group | *HTML, Tailwind CSS, JavaScript*

- MedPoint: appointment booking app with a symptom-based specialist recommender. The Indus Group: 12-page corporate website with a logistics CBM calculator

Tools & Technologies

AI Tools: Claude Code, Codex, VS Code Chat, Antigravity, Google Gemini API (RAG, Embeddings)
Web Stack: React, Flask, Tailwind CSS, REST APIs, JWT Authentication
Databases: PostgreSQL, Supabase (Auth, Row-Level Security, Edge Functions), pgvector
Data: Python, SQL, Pandas, Matplotlib, Seaborn, Power BI, Excel
DevOps: Git, GitHub Actions, Render, Vercel, Netlify

Certifications & Simulations

Microsoft Certified: **Azure Data Fundamentals (AZ-900)**
Microsoft (Coursera): **Preparing Data for Analysis with Excel; Harnessing the Power of Data with Power BI**
Data Analytics Virtual Job Simulations: **Deloitte and Accenture (Forage), 2025**
